ABSTRACT

Enrollment trends at Los Angeles City College from September 1960 through June 1974 are presented in the form of graphs supplemented by statistical tables. Observations and conclusions derived from the data include: (1) With the exception of Fall and Spring 1969-70, day enrollments arose steadily from 1963 to 1973, with a leveling off in the 1973-74 school year; (2) Evening enrollment fluctuates considerably more than day enrollment; (3) Male enrollment percentage has been consistently higher in the day than in the evening; (4) Percentage of full-time day students (those carrying 12 or more units) rose from 58 percentage in 1964 to 70 percent in 1967 and then declined back to about 58 percent; (5) Numbers of first time day freshmen have been fairly steady for ten years, the increase in enrollments is thereby attributed to an increase in continuing students; (6) Students tend to carry lighter loads and stay in school longer than they have in the past; (7) Average Daily Attendance (ADA) generally reflects the same patterns as enrollment; (8) Enrollment trends from the 20 major "feeder" Los Angeles high schools show that the percentages of graduates from these high schools attending Los Angeles City College has remained steady at approximately 20 percent. "SOME TRENDS IN L.A.C.C. ENROLLMENTS, 1960-1974"

PURPOSE OF THE STUDY

Research Study #72-1 analyzed various aspects of Los Angeles City College enrollments over the period 1960-1971. The purpose of the present study is to update through Spring, 1974 some of that information, with special emphasis upon high school sources of L.A.C.C. enrollments.

PROCEDURE OF THE STUDY

Data for the study were obtained from available L.A.C.C. records and official enrollment forms (CCAF 130 and 131) sent by the Los Angeles Community College District to the State Chancellor's Office. Numbers of high school graduates were obtained from information provided by the Los Angeles Unified District.

FINDINGS

Data are presented in the form of graphs, followed by tables showing data on which the graphs were based.

The following graphs are presented:

Dashed lines indicated on several of the charts are "three-sigma limits". If all points on a chart fall between these lines, it can be assumed that fluctuations are due to random or chance causes. Points falling outside these limits indicate causes other than chance are in effect. While all causes for significant variation obviously cannot be identified, the following events appear to merit consideration as affecting enrollment figures:

1963-64 ..... Matriculation requirement for evening students
1966-67 ..... enlargement of Los Angeles Junior College District
September, 1967 ..... opening of Los Angeles Southwest College
February, 1969 ..... opening of West Los Angeles College
March, 1969 ..... campus "strike"
July, 1969 ..... new Board of Trustees
September, 1969 ..... initiation of out-of-state tuition
February, 1970 ..... elimination of Los Angeles High Schools midyear graduation
September, 1970 ..... initiation of "adult" fee
1972-73 ..... change from local to District computer

SUMMARY AND CONCLUSIONS

This study presents some statistics relating to L.A.C.C. enrollments over fifteen years (September, 1960 through June, 1974). Following are some observations on the data presented:

BEST COPY AVAILABLE

(1) With the exception of Fall and Spring 1969-1970 (following the year of maximum campus unrest), day enrollments rose steadily (averaging about 4% increase per year) from 1963 to 1973. The 1973-1974 year (Fall and Spring) showed a leveling off. Although not reported in this study current Fall, 1974 figures indicate an all-time high.

(2) Evening enrollment has fluctuated considerably more than day enrollment over the period, dropping steadily from 1960 to 1964, rising slightly in 1965 and 1966, dropping again in 1969, 1970, and 1971. Since 1971, evening enrollments have been increasing. Prior to 1963, evening enrollments exceeded day enrollments; since then the reverse has been true.

(3) From 1960 to 1971, percent male enrollment dropped steadily for both day and evening. Male percentage has been consistently higher in the day than in the evening.

(4) Percent full-time day students (those carrying 12 units or more) rose from 58% in 1964 to 70% in 1967 and then declined, now back about 58%. Although small, the number of evening students carrying a full load has increased steadily over the past ten years.

(5) With the exception of Fall, 1972 (where some figures are suspect due to a computer changeover) the numbers of first time day freshmen have been fairly steady for ten years. The increase in day enrollments is accounted for almost entirely by the increase of continuing students. Apparently the trend has been for students to carry lighter unit loads and stay in college longer.

(6) Average daily attendance (ADA) generally reflects the same patterns as enrollment.

SUMMARY AND CONCLUSIONS (continued)

(7) The study has investigated enrollment trends from the twenty major "feeder" Los Angeles high schools. With the exception of a slight drop in 1970 and 1971 (following the campus unrest periods) the percents of graduates from these high schools attending L.A.C.C. has remained steady, at about 20%. Numbers of graduates from these schools has risen only slightly over the past twelve years, as they are city schools in areas of small population growth. Numbers of graduates from all Los Angeles district high schools has risen at a much faster rate, primarily because of growth in the San Fernando Valley.

(8) With regard to specific high schools, increases in L.A.C.C. enrollment percents can be noted from Belmont, Marshall, Hollywood, decreases from Fairfax, Hamilton, and Los Angeles. The latter are apparently affected by the opening of West Los Angeles College. Similar decreases from schools which might be expected to be affected by Southwest Los Angeles College are not apparent.
